

Mercadopago Payment Gateway Module for Prestashop

Tested in Prestashop versions:

1.3.1.1 - 1.3.7.0, 1.4.1.0 - 1.4.11.0, 1.5.0.17 - 1.5.6.0

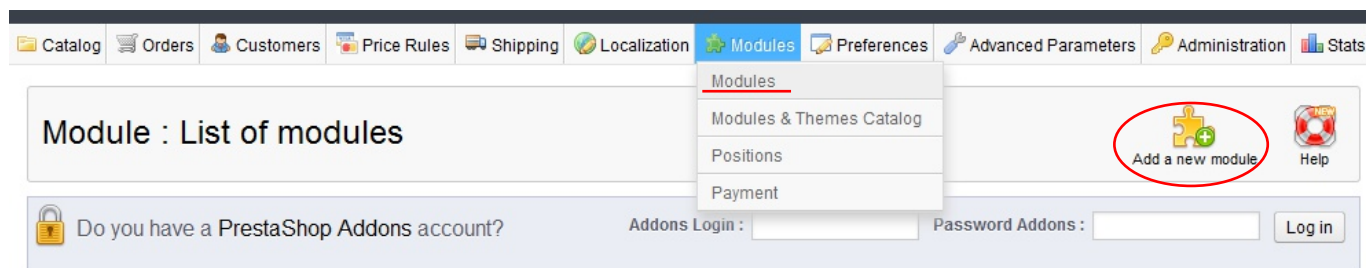

Version: 2.05

Author: Rinku Kazeno

Support: development@kazeno.co

Thanks for purchasing my **Mercadopago Payment Gateway Module for Prestashop**. Here's how to install and use it:

Installation

1. If your Prestashop version allows it, you can add the module automatically from your **Back Office** by going into the **Modules** tab, selecting **Add a new module**, and uploading the zip file from your web browser.

If you're using an older Prestashop version, or are having problems with the automatic installer, you need to extract and upload the **mercadopago** folder (inside the zip file) to your **Modules** folder inside your Prestashop directory by FTP.

 Module(s) installed successfully.

[Configure](#) [Disable](#) [Reset](#) [Delete](#) [Mark as Favorite](#)

That's it, your module is now installed! You should get a warning saying the module isn't configured yet, so let's do that now.

Configuration

1.0 Before configuring the module, make sure that the Currency for your Mercadopago account country *is currently installed and enabled in your shop*. If in doubt, check the **Currencies** section of the **Localization** tab (Prestashop 1.5) or the **Currencies Restrictions** section of the **Payment** tab (Prestashop 1.4).

[Disable](#) [Reset](#) [Configure](#) [Delete](#)

1.1 In the **Payments & Gateways** section of the **Modules** tab find the Mercadopago module. Click Configure.

Mercadopago

1. Account

Country Mexico

After selecting your country above and logging into your Mercadopago account in a different browser window, you'll find the info you need at the following address (opens in a new window): <https://www.mercadopago.com/mlm/herramientas/aplicaciones>

Client Id

475932796846216

Client Secret

WT86USxNtlpxPIIPvEOksMa351dfr0

Remember you must select your merchant currency in the "Currencies Restrictions" section of the "Payment" tab.

Currently selected currency for this module: **MXN (MXN)**

2. Payment methods you wish to accept

1.2 Select the **Country** of your account. In a new browser window log into your Mercadopago Account to get the site's cookies and return to your Prestashop window. Now click the link *below the Country Selector* to go into your **Mercadopago Credentials**.

Credenciales MercadoPago

Client_id: 475932796846216
Client_secret: WT86USxNtlpxPIIPvEOksMa351dfr0

Mercadopago

1. Account

Country Mexico

After selecting your country above and logging into your Mercadopago account in a different browser window, you'll find the info you need at the following address (opens in a new window): <https://www.mercadopago.com/mlm/herramientas/aplicaciones>

Client Id

475932796846216

Client Secret

WT86USxNtlpxPIIPvEOksMa351dfr0

Remember you must select your merchant currency in the "Currencies Restrictions" section of the "Payment" tab.

Currently selected currency for this module: **MXN (MXN)**

2. Payment methods you wish to accept

1.3 In the **Mercadopago Credentials** page you'll find the info you need to configure the module. Copy it into the corresponding fields of the module. Ignore the selected currency for now, as it'll be adjusted automatically when you save your changes.

2. Payment methods you wish to accept

Credit Card ☒

Bank Transfer ☒

Debit Card ☒

ATM Bank Transfer ☒

Ticket ☒

Additional fee

Additional fee you want to charge customers who choose this payment option. Can be either a fixed amount (without the percent sign) or a percentage (ending with the percent sign). Set to either 0.00 or 0.00% to disable.

1.4 Select the **Payment Methods** you wish to accept through Mercadopago in your store.

1.4.1 If you wish to charge an **Additional fee** to your customers who select Mercadopago as their payment method, you can add it here. If you put in an amount it will get automatically added to all Mercadopago orders. If you put in a percentage (followed by the % sign), the fee will be added as a percentage of the total amount to be payed by the customer. If you don't wish to charge an additional fee, you can leave it as either 0.00 or 0.00% .

3. Client Checkout Type

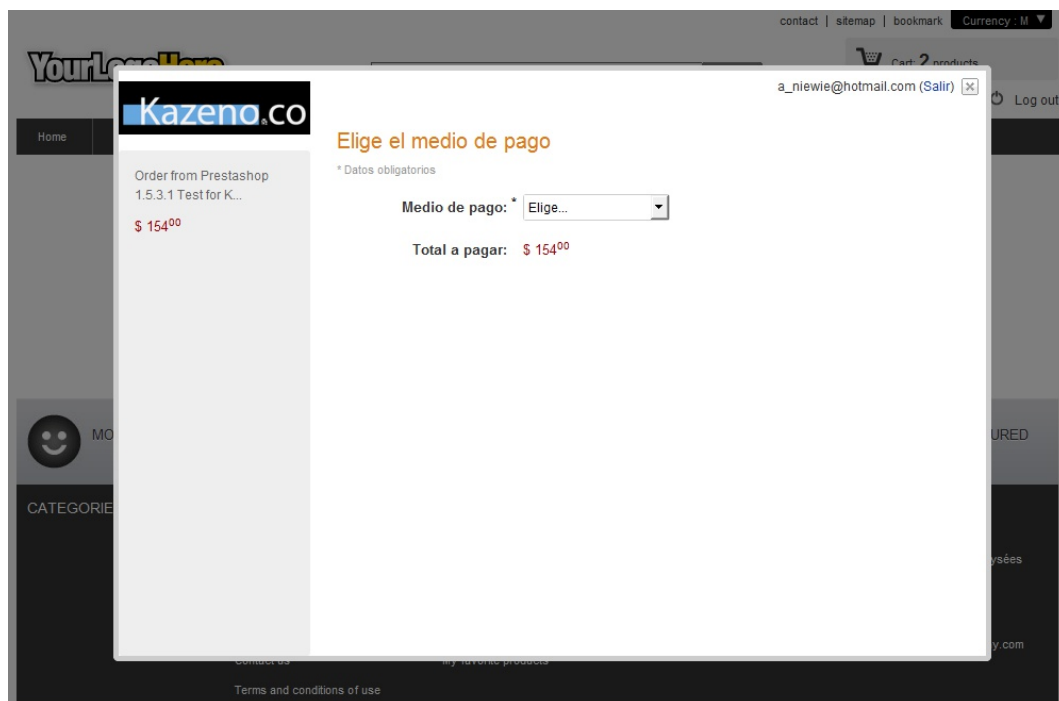

Modal Window ☒

Redirection ☐

Enable sandbox mode ☒ (Only for testing, normal payments won't work until disabled)

Sandbox mode allows you to test Mercadopago's checkout using simulated payments, without using your own credit cards or Mercadopago account balance. You can check how to use it when making test orders to generate specific payment statuses at the following URL (opens in a new window):
https://developers.mercadopago.com/sandbox?lang=en_US#sandbox-ip-examples

1.5 Select the **Checkout Type** you want for your clients. The following screens illustrate how each will look in your store:

Modal Window: Translucent overlay on top of your store's page

Order from
Prestashop 1.5.3.1
Test for K...

\$ 154⁰⁰

Elige el medio de pago

* Datos obligatorios

Medio de pago: *

Total a pagar: \$ 154⁰⁰

[«Cancelar y volver al sitio del vendedor](#)

Procesado por 

Redirection: User is temporarily redirected to MercadoPago's server

1.5.1 Check **Enable Sandbox mode** if you wish to test your store's MercadoPago checkout by using simulated payments. These simulated payments are processed by MercadoPago's servers the same way as real ones, but by using special test data you don't need to use your own credit cards or mercadopago account balance. You can find the test credit card numbers on the link below the checkbox; you can use any name and verification code you wish. **Remember your store will only accept simulated payments while in sandbox mode**, so it must be disabled in order to process real payments from your clients. When Sandbox mode is on, your checkout will look like this:

Sandbox

4. Integration

You need to configure the IPN address in your Mercadopago account. Copy the following address into your clipboard:

http://test.kazeno.co/Prestashop_1.5.3.1/index.php?fc=module&module=mercadopago&controller=validation

Now open the following link, which will take you to your Mercadopago IPN settings page, and paste the above address you just copied into the "Notification URL" field and click "Save":

<https://www.mercadopago.com/mlm/herramientas/aplicaciones> (opens in a new window)

Pending Order Status:

This is the status that will be assigned to incoming orders marked as "pending". You can create a new status by selecting "Create a new status" and naming it something like "Awaiting Mercadopago Payment"

Save

1.6 Copy the URL displayed at the top of the **Integration** section. Now click the link *on the bottom* to go into your **Mercadopago Payment Notification Settings** and paste the URL you just copied into the Notification URL field. Save the changes you made in the **Mercadopago Payment Notification Settings window**.

4. Integration

You need to configure the IPN address in your Mercadopago account. Copy the following address into your clipboard:

http://test.kazeno.co/Prestashop_1.5.3.1/index.php?fc=module&module=mercadopago&controller=validation

Now open the following link, which will take you to your Mercadopago IPN settings page, and paste the above address you just copied into the "Notification URL" field and click "Save":

<https://www.mercadopago.com/mlm/herramientas/aplicaciones> (opens in a new window)

Pending Order Status:

Status Name:

Status Color:

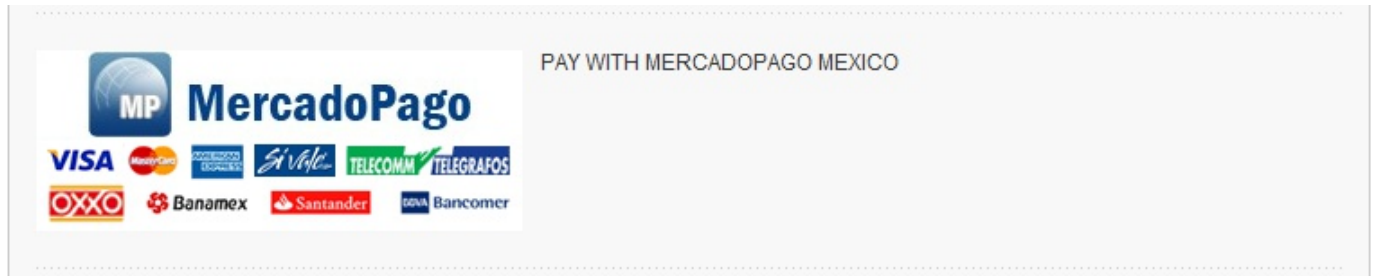

This is the status that will be assigned to incoming orders marked as "pending". You can create a new status by selecting "Create a new status" and naming it something like "Awaiting Mercadopago Payment"

Save

1.7 Return to your Prestashop browser window. Select the **Pending Order Status** you wish to use for pending payments; **if you haven't created one yet**, select `==Create a new status==` and two new fields will appear. Write a *name* for the new status and select a *color*.

Finally, click **Save**. Hooray, you just finished configuring this module!

Usage

Once you have enabled and configured the module, your customers will get the option to pay using MercadoPago when they Checkout. When they press "Pay" they will use MercadoPago's checkout system to process their payment.

2	WXCJMETAG		T. Test	M94.00	Mercadopago	AWAITING PAYMENT	2013-05-08 07:45:08	--	

When a customer completes an order using **Mercadopago**, its **Status** will be set to "Awaiting Mercadopago Payment" until the system receives an IPN notification from MercadoPago's servers that the order's status has changed, in which case it will query MercadoPago's servers to get the updated transaction data. If the order has been paid, the system will change the **Status** to "Payment Accepted".

Print order

If you open a **Mercadopago** order from the **Orders** tab, the system will query Mercadopago's servers, and display the real-time status of the payment above the *Invoice* section. If you decided to charge an additional fee to orders paid through Mercadopago, the extra charged amount will also be displayed here.

Final notes

I hope you found this module easy to use, and I especially hope it can help your online store to grow. If you liked it (or if you didn't), rate it at the [Prestashop Addons Store](#) and let the world know, I would love to read your opinion.

As a customer, you have access to all future updates of this module at no extra charge from your Prestashop Addons account. Remember that if you have any problems, questions or suggestions, you can always contact me at my e-mail:

development@kazeno.co

If you're reporting a problem, please include the Prestashop version of your store, as well as the version of this module you're running.

Happy selling!
